Visit the portal (<https://developerengine.fisglobal.com/>)

## INTRODUCTION

Innovators build on us! With hundreds of APIs available, Developer Engine allows FinTech developers to

leverage our strength in the payments industry and quickly code to best-in-class APIs. With Developer

Engine, you can easily accept payments, integrate banking solutions, send payouts, and manage

business online.

We encourage self-discovery of FIS' products via Developer Engine. With tools like Solution Finder,

persona-driven landing pages, search, and quick filtering, developers can identify the perfect solution.

Developers can view documentation and interactive diagrams, get API credentials, and integrate

seamlessly with our fintech software. We also host APIs and SDKs that allow you to code

boldly –

whether you're a SMB, Enterprise Merchant, bleeding-edge Fintech or scalable Platform.

Explore our robust offering of experience APIs to meet your business goals.

## WHY NOMINATED?

### **Best Findability of Products in a Devportal:**

Due to the breadth of products offered by FIS, Developer Engine provides various self-discovery tools to

help developers find the solution to their problem. Solution Finder recommends a product based on

how customers answer four questions about their location, business type, and problem. Business Type

landing pages isolate APIs, SDKS, and use case documentation for the customer's selection. Hoverable

navigational menus, quick filters, and search capabilities round out our self-discovery tools.

### **Best Served API Business Model:**

FIS' Developer Engine is leading the way to cross-sell products from banking into payments and vice-a-

versa. As the single entry point for APIs spanning across banking, payments, Capital Markets, and

FinTech solutions, the site provides a uniform look and navigation to ensure the best customer

experience, while exploring products across industries.

### **Best Visual Design:**

We designed FIS Developer Engine to provide a natural flow from FIS' high level expectations, to product

overviews, into API technical documentation. This design accommodates decision makers, business

analysts, and developers themselves. To align with developer preference, we provided the dark themed

background. And, finally, we designed the site to provide a uniform look and navigation, which allows

for consistency across all business units.
